

How to use (Ecoregion/FLP Area):

1. Select Ecoregion or FLP Area in the **Visualize by** panel. When selected, the plot panel will appear.
2. Click on an Ecoregion/FLP Area (areas contained by boundary lines).
3. Select which plot to view from the navigation bar.
4. Select the variable(s) to include.
5. Click **Generate Plot**. These plots are not interactive – if variables are changed, the **Generate Plot** button must be clicked again.
6. (Optional) Click **Download Plot**.

How to use (Map point):

1. Select Map point in the **Visualize by** panel. When selected, the plot panel will appear.
2. Click on the map to add a point.
3. Select which plot to view from the navigation bar.
4. Click **Downscale Data**. This will take about 10 seconds (the Time Series data can take up to a minute).
5. Select the variable(s) to view. These plots are interactive – when a variable is changed, the plot will automatically update.
6. (Optional) Click **Download Plot**.

How to use (Climate map overlay):

- Click on the **Show climate map** checkbox in the **Visualize by** panel.
- Select the map resolution and the variable to view.
- Click **Load**. It will take 5-10 seconds for the map to render.
- (Optional) Zoom in to an area of interest and click **Rescale** (the overlay of interest must be loaded first).
- (Optional) Click **Download**.

Note: Climate map overlays can be used during Ecoregion/FLP Area/map point selection and plotting.
